

Redmine - Defect #19595

Broken "receiving emails"

2015-04-12 06:03 - Semyon Dubina

Status:	Closed	Start date:	
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	Email receiving	Estimated time:	0.00 hour
Target version:		Affected version:	3.0.1
Resolution:	Duplicate		
Description			
After update 2.6.1 -> 3.0.1 fetching emails from an IMAP server is brokened with error: PG::AmbiguousColumn: ERROR: column reference "address" is ambiguous LINE 1: ...s"."type" IN ('User', 'AnonymousUser') AND (LOWER I... ^ : SELECT DISTINCT "users".* FROM "users" INNER JOIN "email_addresses" ON "email_addresses"."user_id" = "users"."id" WHERE "users"."type" IN ('User', '>'AnonymousUser') AND (LOWER IN ('wordpress@itunion.info')) ORDER BY "users"."id" ASC LIMIT 1 In sql bothe tables(email_addresses and users) have column "address". <i>Not sure when the columns were created. If it is not "out of the box", then this one of some plugins.</i> Step-by-steb find out: having_mail have wrong condition: joins(:email_addresses).where("LOWER(address) IN (?)", addresses).uniq For me worked: joins(:email_addresses).where("LOWER(email_addresses.address) IN (?)", addresses).uniq
