I guess this is unimportant, or very difficult to do. I'd love to work on it myself, but I have too much other crap to do :(

I hate bugzilla's insane perl dependencies, and it's not very well integrated. I'd love to try to use redmine instead, at least for the bug tracking part of it, but I can't because the bug tracker is very weak feature wise. </rant>

Poking again. It'd be really, really nice to be able to obsolete an attachment. It's really the only thing keeping me from trying to push redmine on our project :)

I think this feature is very useful when a long queue of patches is attached to a ticket. When patches are committed we will be able to mark them as obsolete and only show future new patches: this would make life easier for the reviewer. Is it possible in your opinion to foresee a release in version 6.0 or 5.1.x?

Obsoleted attachments should be grouped in a collapsed treelist for better UX.

[Marius BĂLTEANU](#) Any chance of seeing this landed in the next minor\major versions?
