The fix is not general and depends on your redmine configuration.

In many situations it will not work.

We query issues for all users without checking the permission (as admin). And using permission only when view/edit issue.

Also we change some layout elements (project drop down in search).

Redmine work fast if you have small amount of projects.

But In current state redmine can't work with large organization with many roles and projects.

Probably its not designed for it.

If you not familiar with ruby and sql - chose different platform.
