

Redmine - Feature #20129

Filter by subtasks to some level of depth

2015-06-18 18:40 - Sebastian Paluch

Status:	New	Start date:

Category:	Issues filter	Estimated time:	0.00 hour
Target version:			
Resolution:			
Description			
With respect to #6118 , the only option that seems to be missing under "subtasks" is ability to show issue hierarchy depth to some level. This is useful to see overall list of job to do for a project to some level of details.			

History

Here is the SQL for "subtasks_depth" filter:

```
def sql_for_subtasks_depth_field(field, operator, value)
  case operator
  when "*"
    return
  when "!*"
    "(SELECT (COUNT(parents.id) - 1) FROM #{Issue.table_name} AS parents WHERE #{Issue.table_name}
.lft BETWEEN parents.lft AND parents.rgt AND #{Issue.table_name}.root_id = parents.root_id) = 0"
  when "><"
    depth_from = value.first.to_i || 0
    depth_to = value.last.to_i || 0
    if depth_from > 0
      depth_from = depth_from -1
    end
    if depth_to > 0
      depth_to = depth_to -1
    end
    "(SELECT (COUNT(parents.id) - 1) FROM #{Issue.table_name} AS parents WHERE #{Issue.table_name}
.lft BETWEEN parents.lft AND parents.rgt AND #{Issue.table_name}.root_id = parents.root_id) BETWEEN " +
depth_from.to_s + " AND " + depth_to.to_s
  else
    depth = value.last.to_i || 0
    if depth > 0
      depth = depth -1
    end
    "(SELECT (COUNT(parents.id) - 1) FROM #{Issue.table_name} AS parents WHERE #{Issue.table_name}
.lft BETWEEN parents.lft AND parents.rgt AND #{Issue.table_name}.root_id = parents.root_id) " + operator + " "
+ depth.to_s
  end
end
```

Is there a chance to add this in one of the 3.1.x release?
