Description			
CSV importer implemented in r14493 raises I18n::InvalidLocale exception after uploading CSV file if current user's language selection is "(auto)".			
This is probably caused by source:trunk/lib/redmine/i18n.rb@14493#L63 .			
<pre>lang = user.try(:language) Setting.default_language</pre>			
User#language returns "" (zero length string) when the users's language setting is "(auto)". I think current_language method should be called instead of language method.

#current_language returns the current I18n locale and does not depend on user. A simple #presence fixed this error [r14504](#).
Thanks for pointing this out.
