Target version:	Candidate for next major release		
Resolution:			

Description

Although CSS class 'overdue' on issues was implemented by #2337, default application.css does not highlight overdue issues yet except for gantt.

This patch makes overdue issues and private issues clearly distinguishable in issue list.

I agree on displaying the due date in red on an issue that is overdue (second screenshot).

But for the issue list, I don't know. I find it confusing to have almost the same color the 2 really different things (overdue/private). And some people only use private issues in their projects, that would make a lot of red on the issue list.

Updated the patch.
Like private note, red border on the left. Private and overdue are clearly identifiable.

[r14732](#) displays the due date in red on overdue issue details.

Styling the issue list is a nice thing but it's not easy to find something that is OK for most people. I personally wouldn't like to have all overdue issues displayed in red on the issue list.
