I meant that issues in the Issues tab have alternating colors for rows, i.e. odd or even rows have color that differs from theme background color for tables. But I believe almost all themes have special background colors for issues with different priority (for example, red for urgent, pink for high, light blue for normal and so on). In this case alternating colors interfere with the priority colors in the table of issues and it becomes more difficult for the user to distinguish priorities. I mean priority coloring style expects that all the issues in the table have the same background color. But now we have styles mix.
