Description My use case is exporting a wiki page into a pdf file. With this particular use, I only want the rendered textile content and nothing else. I do not want certain fields to appear in the pdf, such as <ul style="list-style-type: none">• list of attachments - awkward in the printable context.• project name - Sometimes I want it to be stand alone• foot notes - Sometimes I do not want it. The default behavior probably satisfies more than 99% of the needs, Is there a way to accomplish this without changing the default? Any suggestions in order to proceed is appreciated.

- File `wiki_pdf_helper.rb` added

Here is a tweaked version that "turns off" everything except the wiki content itself.

Does adding an export setting per user sound like a good idea?
