

Redmine - Defect #20995

Automatic done ratio calculation in issue tree is wrong in some cases

2015-10-15 09:34 - Felix Schäfer

Status:	Closed	Start date:	
Priority:	Normal	Due date:	
Assignee:	Jean-Philippe Lang	% Done:	0%
Category:	Issues	Estimated time:	0.00 hour
Target version:	3.2.0	Affected version:	
Resolution:	Fixed		
Description			
<p>Currently the done ratio of parent issues in an issue tree is calculated based on the average of done ratios of the <i>leaves</i> bellow that issue source:/tags/3.1.1/app/models/issue.rb#L1491. This however can lead to inconsistencies in the automatically calculated done ratios.</p> <p>For example: issue C with a done ratio of 50% and an open status, which is a subtask of issue B with a done ratio of 70% automatically set by its (open) status, which itself is a subtask of issue A, with a status that doesn't automatically set the done ratio. In that case, A will have an automatically calculated done ratio of 50% because it will be calculated based on the leaf's done ratios, i.e. from C, although its only direct child has a done ratio of 70%.</p> <p>Is there any rationale to keeping the calculation of the done ratio based on the leaves? I would like to change it to be calculated based on the done ratios of the direct children. If this is an acceptable change I can work on a patch.</p>
