Redmine - Defect #21123

Extend a content_type field for Attachment

2015-11-01 14:22 - Ivan Zabrovskiy

Status:	Closed	**Start date:**	
Priority:	Normal	**Due date:**

Category:	Attachments	**Estimated time:**	0.00 hour
Target version:			
Resolution:		**Affected version:**	

Description

Now content_type field has 30 symbols limit. In case of using Attachment for custom models this limitation is very uncomfortable. For example, if I have a model into module, then full name of model always will be greater then 30 symbols. Moreover for this type of models Attachment will be saved without warnings or errors. But cuntent_type will be cuted and record become invalid.

Same thing can happens with disk_filename, which has 255 limit. But in this case situation can by fixed by moving of Redmine directory closer to root of file system.

- Tracker changed from Patch to Feature

#2 - 2015-11-25 15:51 - Toshi MARUYAMA

- Tracker changed from Feature to Defect

- Target version set to 3.2.0

#3 - 2015-11-25 15:58 - Toshi MARUYAMA

I see attachment.content_type is varchar(30) on MySQL.
But, r739 and r1222 changed limits.
Bug of migration?

#4 - 2015-11-25 16:05 - Toshi MARUYAMA

r1222 auth_sources.account is varchar(30), too.

#5 - 2015-11-25 16:13 - Toshi MARUYAMA

But r1222 changesets.committer is varchar(255).
I don't know why?

#6 - 2015-11-25 16:35 - Toshi MARUYAMA

- Target version deleted (3.2.0)

I ran "rake db:migrate" on Ruby 1.9.3 MySQL at 2.6-stable r14890.
attachment.content_type, auth_sources.account and changesets.committer are varchar(255).
It seems bug of rails or mysql adapter in old version.

- Status changed from New to Resolved

You right. All this fields has a 255 limit. My apologies. Looks like this is my fault during Redmine installation. Thanks for help!
