

Redmine - Defect #21181

Markdown Formatter incorrectly parses lists

2015-11-08 21:44 - Anonymous

Status:	Closed	Start date:	
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	Text formatting	Estimated time:	0.00 hour
Target version:		Affected version:	3.1.1
Resolution:	Fixed		

Description

Originally I wanted to raise a bug about the markdown formatter wrongly interpreting a list sub item as code, because it ignored the double indentation instead of single indentation for code in lists.

But while building a proper example to reproduce the behavior easily I found that the whole list parsing (for both ordered and unordered lists) is borked.

While I would like to be able to provide exact directions to what exactly is wrong here, the more I played around with this, the more confused I got.

What I can tell for almost certain is that blank lines are at the core of this issue. Normally items should be wrapped in <p> tags when separated by blank lines, but here (at least for unordered list items in ordered list items) instead the current ordered list is interpreted as ended and a new ordered list started.

I used the official syntax from <https://daringfireball.net/projects/markdown/syntax#list> as reference, which describes behavior conflicting with what Redmine produces currently.

Example Markup

```
1.  this is a list item with two child items.
    -  first child

      -  second child wrongly interpreted as code
1.  another item in the same list.
-  text wrongly interpreted as ordered list item

1. last item of the ordered list
```

Expected Output (taken from Marxico)

correct.JPG

Output from Redmine's inbuilt Markup Parser

- Status changed from Needs feedback to Confirmed

The real issue here is that the "- text wrongly interpreted as ordered list item" is interpreted as ordered list item instead of unordered. I'm going to report this issue to the redcarpet gem team because is not generated by Redmine.

Regarding the " - second child wrongly interpreted as code" it not quite an issue because of the blank line that precedes this line and the same behaviour is also on the marxico.

- Resolution set to Fixed

The current Markdown implementation based on RedCarpet is deprecated, it is going to be dropped in the future versions and it will be replaced by the CommonMark Markdown (Github Flavoured) formatter that is available in Redmine 5.0.0 ([#32424](#)).

To fix this issue, you should migrate to the new engine which correctly parses the lists:
