

Redmine - Feature #2120

Different views between develop and funcional

Resolution: Fixed	

Description

Using Redmine I have problems linking with SCM (Subversion), because:

- I have multiple projects on Redmine
- Each project uses more than one SCM component (library, fron-end, back-end, authentication, etc..), with some of them shared between projects.
- I can link only one SCM repository to a project.

Doing this I have done high-level project, one for macro-area, using subproject for real project.
My intent was to link macro-area to SCM repository, hoping that subproject inherit their parent SCM.

It seems not to be a good idea.

I've changed ./app/models/changeset.rb, and with this patch I can see now the revision link on my Issue:

```
*****
*** 83,88 ****
--- 88,99 ----
    action = match[0]
    target_issue_ids = match[1].scan(/\d+/)
    target_issues = repository.project.issues.find_all_by_id(target_issue_ids)
+
+   #Ora i child
+   Project.find(:all, :conditions => ["parent_id = ?", repository.project.id]).each { |cp|
+     target_issues = target_issues + cp.issues.find_all_by_id(target_issue_ids)
+   }
+
    if fix_status && fix_keywords.include?(action.downcase)
      # update status of issues
      logger.debug "Issues fixed by changeset #{self.revision}: #{issue_ids.join(', ')}." if l
ogger && logger.debug?
```

Now if I click on revision number I get a 404 error, not found, instead of see changes on my code.
I suppose that someone else have the same problem, matching funcional view with project (and developement) view.
Any idea on how to resolve my error ?
Does someone has a better idea on how to review my project ?

Thanks a lot,
Andrea

- Status changed from New to Closed

- Resolution set to Fixed

Fir quite some time, you can

- have multiple repositories per project ([#779](#))
- link to issues in any project ([#3087](#))

As such, I believe your patch is not necessary anymore and your requirements can all be met with basic Redmine.
