I'm not a big fan of icons everywhere. We already have icons for the main actions links (Edit, Watch...) and I'd prefer to keep export links as they are.

The "Also available in" just below uses rss icon for atom, so it would make sense to make this consistent by either adding the pdf icon or removing the rss icon.

Thanks, didn't see that one.

I actually kinda agree. Part of the reason I did Patch [#21256](#) is to be able replace all icons with the less prominent FontAwesome icons. Because they're just in the color of the text, they don't stick out as much...

In revision [r23743](#), the icon was removed from the Atom link under "Also available in.", which was the only link that had an icon. There are no plans to add icons to other links like PDF or CSV in the future.
