Target version:				

Description

Hi,
I've made patch to implement feature #1975, child_pages macro after the patch work as follows:
When no parameter is given works as before.
When page name is given as a parameter it renders page hierarchy including page from parameter. Example:

{{child_pages(Foo)}}

results in:

- Foo
  - Bar 0
  - Bar 1

Wiki syntax page was updated to match changes.

History

#1 - 2008-11-22 12:46 - Jean-Philippe Lang

- Status changed from New to Closed

Feature added in r2053. See #1975.
