Redmine - Feature #2184

Command line ticket creation?

Description

Ok, I apologize up front if this is covered somewhere, but I have not been able to find it -- thus this ticket. :)

I am looking for a way to create and manipulate tickets, projects, etc from the command line. I need to be able to automate the creation of some projects and tickets and tie it in to the other scripts running.

Is this already possible? If so, how!? ;) If not, would it be possible to add this?

Thanks!

I think this is possible. You may write some scripts using cURL <http://curl.haxx.se> :)

Hello,
I've started a project to do this: http://github.com/textgoeshere/redcmd.

Wait for #1214 and your problem would be solved:)

I close this issue.
You can create issues with the REST-API as mentioned above.

Best regards,
Daniel
