

Redmine - Feature #22071

Different outgoing email addresses - per project email alias / different incoming email alias with mapping into a specific project

Description			
<p>Outgoing notification emails are using a single outgoing address. If we have customer projects, with customers on a notification set, they all receive notifications/updates from a single address. Now i had to explain a customer that he has to put project: <project> in his email, which mostly doesn't work. So emails end up in a shared project and needs to be re-assigned/dispatched.</p> <p>Request: Define an email alias per Project like <alias1>@redmine.com so that a user <alias1> always will be mapped into project <prj1>. so i can tell mycustomer1 to send emails to mycustomer@redmine, mycustomer2 to mycustomer2@redmine. Same for updates being sent off a project - which gets the according email alias.</p>
