

Redmine - Feature #22125

Make Search default to current project and sub projects

Description

I am a heavy user of sub-projects. I tend to group all the projects under the responsibility of a team under a team project and group all the team projects under a master project. That way I can quickly view lists of issues that are late, pending my input or need other attention.

Because of this I am often focussed on a high level grouping project. Then when I search for a particular issue I get no results because I need to change the search mode from the current project to the current project and its subprojects:

mode.jpg

I have to do that **every single time**. It is my opinion that this should be the default behaviour - I feel that sub projects are a component of their parents and would normally warrant searching. However if this change is not desired then please could we have a setting to set the default?
