Description

Hi, folks!
Wiki don't have feature to edit single section on page. (see mediawiki)
I think it maybe good.
Thanks.

Editing large wiki pages is cumbersome without.
Would be a great addition!

#8 - 2009-03-23 04:24 - Alain D.

+1 when maintaining a document (let's say a scope statement) in the redmine wiki, if it begins to be big, we have to split it in different pages (as it's really hard to find where to do the edits), but nor the include macro nor the child_pages are sufficient to offer a one page view of this document (the toc doesn't cover the included pages sections)

The ideal solution would be to keep this document in a single page, but to be able to edit only parts of it (as does many existing wiki platforms)

Hi folks. **I've implemented this feature for the stable release v.0.8** and we are going to test this in the following two weeks. So stay tuned. ;)

I'm going to release the modification as a patch within the next days. I used Nokogiri for HTML parsing, so you'll need to install it.

And it works nice so far. Check out the screenshot.

- File wiki_section_edit-v0-9.patch added

- % Done changed from 90 to 100

Hi folks,

Here is the first release for Redmine 0.8. As I said, you need [Nokogiri](). On a RHEL or Centos System you can install Nokogiri like the following:

```
sudo yum install libxml2 libxml2-devel libxslt libxslt-devel
sudo gem install nokogiri
```

Then install the patch:

```
patch -p0 < wiki_section_edit-v0-9.patch
```

Let me know if it works for you.

Cheers,
Manuel

If you want to remove the patch:

```
patch -p0 -R < wiki_section_edit-v0-9.patch
```

#13 - 2009-06-10 11:39 - Leonid Myravyev

Thanks!

But rubyforge.org is down :-(

#14 - 2009-06-11 13:51 - Leonid Myravyev

It work!
Thank you very much. :-)

Is this in version 0.8 now? If not, it'd be nice to have still.

By the way, we're on Redmine 0.8.4.stable.2819 (MySQL) and I don't see it.

It would be great if you could updated this patch or add it to trunk.

I tried applying this patch to trunk #1329 and it failed. I applied it manually but this lead to exceptions. I am not a Ruby/Rails programmer and I couldn't figure out the problem.

Oops, there was a small bug in version 1. This is now the corrected version 1.1.

#20 - 2010-05-24 20:56 - Alexis Lahouze

I think this feature is necessary for collaborative work on the wiki. This would avoid many problems when users are working on the same part of the project, and edit the same page at the same moment.

So:

```
while(true) {
    echo "+1";
}
```

:)

#21 - 2010-05-25 15:47 - Ben Oakes

Nice. +1 to your +1. :)

The patch doesn't seem to work with 1.0 (r3858) though, getting the following error:

```
patching file app/helpers/wiki_helper.rb
patching file app/helpers/application_helper.rb
Hunk #1 FAILED at 402.
1 out of 1 hunk FAILED -- saving rejects to file app/helpers/application_helper.rb.rej
patching file app/controllers/application_controller.rb
patching file app/controllers/wiki_controller.rb

#30 - 2011-11-18 17:45 - Jean-Philippe Lang

- Status changed from New to Closed

- Assignee set to Jean-Philippe Lang

- Target version changed from Candidate for next major release to 1.3.0

- % Done changed from 50 to 100

- Resolution set to Fixed

Feature added in [r7829](#). It also allows multiple users to edit different sections at the same time if they don't conflict.

#31 - 2011-11-18 18:40 - Etienne Massip

- Status changed from Closed to Reopened

Found a glitch:

- if a section contains

  `@WHATEVER@`

  , the next section won't be editable

- when editing a section, there is no way to go back to the page
- as a personnal POV, that would be nice to be able to edit the section "inline", meaning staying in the wiki page and being able to see the whole page contents, like for issue comment editing

Very nice work, though!

#32 - 2011-11-18 19:35 - Jean-Philippe Lang

- Status changed from Reopened to Closed

Etienne Massip wrote:

> - if a section contains [...], the next section won't be editable

Fixed in [r7835](#).

> - when editing a section, there is no way to go back to the page

You mean a Cancel link to go back to the page?

> - as a personnal POV, that would be nice to be able to edit the section "inline", meaning staying in the wiki page and being able to see the whole page contents, like for issue comment editing

I dit it the Wikipedia way but there's certainly room for improvement :-)

Thanks for the feedback.

#33 - 2011-11-18 22:29 - Etienne Massip

Jean-Philippe Lang wrote:

> You mean a Cancel link to go back to the page?

Yes, the global idea is that SSE is useful to speed up page editing in focusing on a specific section, so if you change your mind you may want to be right back to the location you were previously in the page.

> I dit it the Wikipedia way but there's certainly room for improvement :-)

That's a very appreciated feature =)(with a cancel button), I'll wait for other peopple feedback =)

#34 - 2011-11-28 09:31 - Etienne Massip

- Status changed from Closed to Reopened

Not confirmed, but could be broken according to Mischa's [#9673](#).

#35 - 2011-11-29 18:53 - Jean-Philippe Lang

- Status changed from Reopened to Closed

Now fixed.
