

## Redmine - Feature #22310

### Custom field of type Link: add new variable to pass the user

2016-03-23 14:48 - Kevin Palm

<b>Status:</b> New	<b>Start date:</b>
<b>Priority:</b> Normal	<b>Due date:</b>
<b>Assignee:</b>	<b>% Done:</b> 0%
<b>Category:</b> Custom fields	<b>Estimated time:</b> 0.00 hour
<b>Target version:</b>	
<b>Resolution:</b>	
<b>Description</b>	
Currently only these variables are supported/documented:	
<ul style="list-style-type: none"><li>• value =&gt; the custom field value</li><li>• id =&gt; id of the customized object</li><li>• project_id =&gt; id of the project of the customized object if defined</li><li>• project_identifier =&gt; identifier of the project of the customized object if defined</li><li>• m1, m2... =&gt; capture groups matches of the custom field regexp if defined</li></ul>	
It would be nice to have another variable to identify the currently logged user. Either by passing the:	
<ul style="list-style-type: none"><li>• user id</li><li>• the login name</li><li>• <b>the user's API access key</b></li></ul>	
I would love to receive user's API access key -> The called webservice could use that key to access Redmine!
