

Redmine - Defect #22896

Root Domain Provides 403 Forbidden Error

2016-05-25 12:29 - Brett Patterson

Status: Closed	Start date:
Priority: Normal	Due date:
Assignee:	% Done: 0%
Category: Website (redmine.org)	Estimated time: 0.00 hour
Target version:	Affected version:
Resolution: Duplicate	

Description

If you browse to <http://redmine.org/> you will receive a 403 Forbidden error from Apache. If you just prepend the "www." to the domain, the site works as expected.

It looks as though you need to add the ServerAlias directive with the value "redmine.org" to the Apache Virtual Host Configuration.
