Description

When creating issue and revision links they don't always appear to work in terms of being converted into automatic links.

They will sometimes not work if you have immediately have a carriage return.

i.e.

Issue [#19](#)
More text

will not work but if you put a space (Or any other character) THEN a carriage return then it will work correctly. (underscore represents a space)

Issue#19_
More text

On some issues it appeared to even when there wasn't a character before the carriage return, I can't account for that.

I have only seen it fail when it is immediately followed a carriage return, maybe some sort of Regexp issue?

History

#1 - 2007-03-20 14:09 - Jean-Philippe Lang

The only case when it fails for me is when [#7777](#) is at the end of the text (note of the line).

I've simplified the regexp and it should be more accurate:

```
/#(d+)(?=\b)/
```

Fix has just been committed in the trunk

Tell me if it solves your problem.

Thanks

#2 - 2007-03-23 07:32 - Jeffrey Jones

I have retested with new trunk export and have been unable to break it. Looks like it is fixed.

Many thanks

Jeff

#3 - 2007-03-23 09:29 - Jean-Philippe Lang

Thanks.
