

## Redmine - Defect #23067

### Custom field List Link values to URL breaks on entries with spaces

<b>Description</b>			
<u>Situation:</u> You have a custom field of the type "List". In your list are entries which run like "entry" and "second entry".  While "entry" will generate a link with the "Link values to URL" using value, "second entry" will not be clickable. If I'd use "second+entry", it'll very well work though.			
<u>Suggested solution:</u> Redmine is to parse blanks and substitute plusses for them automatically before outputting the link. It will present the list entry in the custom field as a clickable link.

This breaks pretty much any url which has fragments. You should never encode the complete url, just the parameters.

Example: Try to link to

`http://example.com#test=%m1%`

The link will now be

`http://example.com%23test=%m1%`
