Redmine - Patch #233

Per project themes patch

2007-10-16 18:50 - Wynn Netherland

Description
I was so excited to see JP had included the ability to theme the app easily. I really wanted to be able to theme projects independently for customer-facing projects. Here is a patch to do so.

Could that be included in trunk?

#2 - 2008-07-17 23:44 - Derek Montgomery

JP?
Can we have this in trunk?

It would permit an redmine admin to let project leaders to have a custom look for their own space...

#3 - 2009-01-16 06:02 - David Bronke

I'd like to see this updated for the latest Redmine, and I may tackle that myself if I have the time. I also think that support for changing the favicon on a per-project basis would be very useful, especially for public-facing Redmine installs, such as my company's. #4 - 2009-02-04 16:35 - S C

I totally agree. For an industrial usage it would be really great.
Looking at the patch, it seems to be easy to add in the trunk...

#5 - 2009-02-21 13:34 - Jean-Philippe Lang

I'd prefer not to add an extra column to the projects table for each settting that could be overridden at project level.
I think a refactoring of the Setting model that would allow storing project specific settings would be a much better solution.

+1, that could open up a lot of additional customization also (e.g. Show subproject issues for Project A, B, and C but not for Project D)

#7 - 2009-07-28 02:56 - Christian Winther

any news on this issue? :)

#8 - 2011-03-23 11:00 - Toshi MARUYAMA

- Category set to Themes

#9 - 2011-07-13 17:13 - Glenn Gould

Any chance to get this included in current Redmine?

It was working fine with 0.9.2, but meanwhile there has been some refactoring of themes.rb and I don't know how to achieve the functionality of choosing a custom theme per project in project settings again which is quiet a pity...

#10 - 2013-04-02 16:38 - Markus Pins

+1 ;-)

#11 - 2014-01-28 11:50 - Dmitry Beloglazov

+1
Would be really nice to have.

#12 - 2016-06-30 17:45 - L 5

I also would like to have this possibility.

I have helped myself by cloning the theme folder and using some rewrite rules in the apache2 server:

```
RewriteEngine On
RewriteCond %{HTTP_HOST} ^project1\.mydomain\.com [NC]
RewriteRule ^r/themes/main_theme_name(.*)$ /r/themes/project1$1 [PT]
```

It works very well - just the email notifications unfortunately all come from the same originating domain and email address... :(
