

Redmine - Patch #23346

Set user's localization before redirecting on forced password change to generate flash message in current user's language

2016-07-15 12:58 - Holger Just

Status:	Closed	Start date:

Target version:	3.3.1		

Description

If a user is forced to change their password on login, they get redirected to a password change form with a flash message set. The flash message however is generated using the locale of the previous request since the current localization is only set to l18n after the redirect. When multiple users with different languages are using a Redmine, the flash message can thus be shown in an unexpected language.

The attached patch against the current trunk fixes this behavior by setting the language before checking for a forced password change.

Associated revisions

Revision 15775 - 2016-08-31 19:01 - Jean-Philippe Lang

Set user's localization before redirecting (#23346).

Patch by Holger Just.

Revision 15776 - 2016-08-31 19:08 - Jean-Philippe Lang

Adds a test for #23346.

Revision 15777 - 2016-08-31 19:10 - Jean-Philippe Lang

Merged r15775 and r15776 (#23346).

History
