Redmine - Feature #23403

Make default search scope configurable

Description

Right now the quick search box only searches the current project. In [#22125](#) the person asking would like to have the default changed to "current project + sub-projects". I'd be interested in setting it to "all projects", while somebody else might like to set this to default to a specific project only.

SO I think it would be best if the admin could set the default scope of the quick search function from the admin backend.

Duplicate of [#9909](#). Would still be great if this feature could be implemented now as well, when the search box seems to be undergoing some change soon.
