Category: Wiki	Estimated time: 0.00 hour
Target version: 0.9.0	Affected version:
Resolution: Fixed	

Description

As noted in help forum [Multiple lines in table cell](#), I also miss table cell with multiple line text.

```
+-----+-----+
| redmine | Multiple projects support |
|         | Flexible role based access control. |
|         | Flexible issue tracking system |
|         | Gantt chart and calendar |
|         | News, documents & files management |
|         | etc. |
+-----+-----+
```

If I want to make above table using textile wiki.
The syntax below would match the expected (using <http://www.textism.com/tools/textile/index.php>).

```
| redmine | Multiple projects support
Flexible role based access control.
Flexible issue tracking system
Gantt chart and calendar
News, documents & files management
etc. |
```

But it doesn't match in redmine.
I must use `rowspan '6.'` to make this looks as expected. It is very inconvenient for a very complex table.

[hard_breaks.patch](#) solves above syntax works.

- comment from source:trunk/lib/redmine/wiki_formatting/textile/formatter.rb#L1955)

I hope redmine experts to check. (I'm total stranger to ruby or rails)

wrong link posted.

source:trunk/lib/redmine/wiki_formatting/textile/formatter.rb@2018#L43 is correct

#2 - 2008-12-16 09:58 - youngseok yi

for a couple of check, this patch breaks quote syntax like below.:(

```
> this is quote  
>> this is double.
```

#3 - 2009-02-17 11:02 - Rene S

We are affected by that too. After a migration from 0.7 to 0.8.1, a lot of tables are broken, because the newline is not handled correctly. Additionally all control commands within the cell are ignored, besides some simple bold/italic commands. So applying plain-html did not work either.

#4 - 2009-05-13 16:23 - Stanislav German-Evtushenko

same for me

#5 - 2009-07-19 16:22 - Jean-Philippe Lang

- *Status changed from New to Closed*
- *Target version set to 0.9.0*
- *Resolution set to Fixed*

Fixed in [r2824](#).
