Redmine - Feature #2353

Easy way to upload images to tasks, then comment on them.

Description

!!
In my business, we work with a lot of graphics, and their different versions. For example, a task might be to draw picture of a dog. The task owner posts a picture of the dog, then I comment on it and tell him to change it. He then makes his changes and reposts another picture of the dog. Then I post a comment, he can also post comments back and forth. Then he makes changes and posts the image again...etc.

Best regards,
Alex

+1
I work with electronics and it is very often needed to provide screenshots for documentation purposes. If a thumbnail would be available, then that would even be better.

- Status changed from New to Closed

- Resolution set to Invalid

Alejandro, you can post an image in a ticket and comment on this, post the image again in your comment and so on.

#3 - 2008-12-19 13:22 - Alejandro Portilla

- File aprilia990.jpg added

Adding test image for second time.

#4 - 2008-12-19 13:26 - Alejandro Portilla

This sort of works,

But it can be improved a bit.
-Thumbnails next to the link.
-Ability to specify the size of those thumbnails.
-Clicking on the link displays the image within the comment section(not a different page).
-Ability to display all images within their comments. This would allow a person to look at the entire progression of images and make comparison on the fly.

Best regards,
Alex
