Resolution:	Invalid	**Affected version:**	

Description

Hello and greetings
I have a problem with redmine receiving emails.

when I run the command in windows 7 in my company
*bundle exec rake redmine:email:receive_imap RAILS_ENV=production host=imap.gmail.com port=993 ssl=1 username=
foo@gmail.com password=foo allow_override=all unknown_user=create
I get the error:
*Socket Error: getaddrinfo: no such host is known.

does someone know how to solve this
