Redmine - Defect #23963

Bulk editing issues from various projects take us to Redmine's root (no project)

2016-09-30 15:15 - Olivier Houdas

Status:	New		**Start date:**	
Priority:	Normal		**Due date:**	
Assignee:			**% Done:**	0%
Category:	Issues		**Estimated time:**	0.00 hour
Target version:				
Resolution:			**Affected version:**	3.3.0

Description

1. Take a Redmine site having a tree of projects with at least 2 sub-projects in a master project.
2. In the master project, list all issues from sub-projects
3. Select 2 issues from each sub-project, right-click and choose Modify
Result: On the Modification landing page, there is no project set. We have lost our project's tabs
Expected result: Either stay in the source project, or assign the first common parent project of all chosen issues to be the current project

I can suggest the attached code for implementing the second solution (based on redmine 3.3.0).
