**Description**

The subtask list should be collapsible when viewing a parent task.

This would be especially useful when using a parent task to collect subtasks that are in turn collectors for other subtasks, essentially a tree structure.

Simple example from a foundry:

Add tax reports

- |
- | - Tax reports for depreciable equipment
  - || - Tanks
  - || - Silos
    - ||| - Sand silos
    - ||| - Gravel Silos
  - | - Tax reports for inventory
    - || - Pattern shop
    - || - Flask repair
    - || - Facilities Management
  - ||| - Cupola
  - ||| - Shakeout
  - ||| - Molding
- | - Tax reports for labor
  - || - Salary laborer
  - || - Hourly laborer
  - || - Contract labor
- ||| - Onsite
- ||| - Offsite

The start of each level of indentation should be collapsible, so that it's easy to get a high-level view of what's left to be done.

History

**#1 - 2016-12-05 10:53 - Anonymous**

Hi Alex,

there is a tree view plugin for issues lists, which supports this. [https://github.com/Loriowar/redmine\\_issues\\_tree](https://github.com/Loriowar/redmine_issues_tree)

cheers

Immanuel.
