

## Redmine - Defect #2462

### Incorrect Week Number in Spent Time Report

2009-01-07 18:41 - Barry Goodsell

<b>Status:</b>	Closed	<b>Start date:</b>	2009-01-07
<b>Priority:</b>	Normal	<b>Due date:</b>	
<b>Assignee:</b>		<b>% Done:</b>	0%
<b>Category:</b>	Time tracking	<b>Estimated time:</b>	0.00 hour
<b>Target version:</b>		<b>Affected version:</b>	0.7.3
<b>Resolution:</b>	Duplicate		
<b>Description</b>			
Whilst using the Spent Time Report, I have noticed that the Week display is incorrect for the first week of 2009. I set a date range of <b>2008-12-17</b> to <b>2009-01-07</b> and set the Report to show <b>Weeks</b> . The Weeks that are displayed are:			
<ul style="list-style-type: none"><li>• 2008-51</li><li>• 2008-52</li><li>• 2008-1</li><li>• 2009-2</li></ul>			
I assume that the third week ought to show as <b>2009-1</b>

### History

#### #1 - 2009-03-26 22:12 - Anonymous

Also affects calendar. I found that problem in our redmine installation and it turns out it's related to the start of the week. Problem is that week 1 of 2009 starts on december 2008,

If you go to calendar for January 2009, the first week is week 52 of 2008, when it should be week 1 of 2009. This doesn't happen if week starts on Monday.

For any week number calculation you should use Monday as first day of week. I would submit a patch, but I don't see any quick way to fix it, I just hacked it to force monday as first day of week, regardless which language you are using.

```
>> d-=1
=> Thu, 01 Jan 2009
>> [d.cweek,d.year,d.to_s]
=> [1, 2009, "2009-01-01"]
>> d-=1
=> Wed, 31 Dec 2008
>> [d.cweek,d.year,d.to_s]
=> [1, 2008, "2008-12-31"]
>> d-=1
=> Tue, 30 Dec 2008
>> [d.cweek,d.year,d.to_s]
=> [1, 2008, "2008-12-30"]
>> d-=1
=> Mon, 29 Dec 2008
>> [d.cweek,d.year,d.to_s]
=> [1, 2008, "2008-12-29"]
>> d-=1
=> Sun, 28 Dec 2008
>> [d.cweek,d.year,d.to_s]
=> [52, 2008, "2008-12-28"]
```

More info about week counting at [http://en.wikipedia.org/wiki/ISO\\_week\\_date](http://en.wikipedia.org/wiki/ISO_week_date)

Quoting:

Mutually equivalent definitions for week 01 are:

- the week with the year's first Thursday in it (the ISO 8601 definition)
- the week starting with the Monday which is nearest in time to 1 January
- the week with the year's first working day in it (if Saturdays, Sundays, and 1 January are not working days)
- the week with January 4 in it
- the first week with the majority (four or more) of its days in the starting year
- the week starting with the Monday in the period 29 December - 4 January
- the week with the Thursday in the period 1 - 7 January
- If 1 January is on a Monday, Tuesday, Wednesday or Thursday, it is in week 01. If 1 January is on a Friday, Saturday or Sunday, it is in week 52 or 53 of the previous year.

I hope this helps fixing the problem. Also, fixing [#2884](#) would allow a quick workaround

## #2 - 2009-03-26 23:24 - Anonymous

Actually, it seems this bug can be fixed by using [Date#cwyear](#) instead of Date#year:

```
=> Fri, 26 Dec 2008
>> 7.times {d+=1; puts [d.cweek,d.cwyear,d.year,d.to_s].inspect}
[52, 2008, 2008, "2008-12-27"]
[52, 2008, 2008, "2008-12-28"]
[1, 2009, 2008, "2008-12-29"]
[1, 2009, 2008, "2008-12-30"]
[1, 2009, 2008, "2008-12-31"]
[1, 2009, 2009, "2009-01-01"]
[1, 2009, 2009, "2009-01-02"]
```

So in `TimelogController#report` change

```
when 'week'
  @periods << "#{date_from.year}-#{date_from.to_date.cweek}"
  date_from = (date_from + 7.day).at_beginning_of_week
```

to

```
when 'week'
  @periods << "#{date_from.cwyear}-#{date_from.to_date.cweek}"
  date_from = (date_from + 7.day).at_beginning_of_week
```

## #3 - 2010-07-21 00:00 - Holger Just

- Status changed from New to Closed
- Resolution set to Duplicate

This issue is being worked in in [#5329](#).

Unfortunately, there are some more subtly difficulties to solve...
