Description

Hi,

Id really appreciate anyone's insight into this continual issue. I am using bitnami redmine on aws and when i install it i then go to install a plugin following instructions. Every and any plugin will work for a while then it usually crashes and i have to reinstall redmine all over again. Its very frustrating as i have reinstalled it about 6 times now. It cant be the plugins as each time i try different plugins (most popular ones).

thanks

Colin
