<b>Description</b>			
<p>I'm developing full text search plugin for Redmine<sup>1</sup>. I want to add rank (score) to search result to check search result rank(score) easily. (It is very hard to read debug log in real time.) Currently I need to overwrite app/views/search/index.html.erb and app/views/search/index.api.rsb completely to add rank to search result. But I don't want to keep maintaining views in my plugin because it is very annoying to keep following upstream changes.</p> <p>This tiny patch provides functionality to display rank(score) in search result. I don't add CSS to display data-rank attribute in search result html by default.</p> <p>We can display data-rank value in search result using following CSS:</p> <pre>#search-results dt a::after {   content: " (" attr(data-rank) ")";   color: gray;   font-size: x-small; };</pre> <p><sup>1</sup> <a href="https://github.com/okkez/redmine_full_text_search">https://github.com/okkez/redmine_full_text_search</a></p>
