I am using redmine on windows so there is no MTA's logs.

In my case, only for **some projects**, notifications are not sent. I receive the following error:

Email delivery error: 550 5.7.1 Unable to relay

Has somebody similar problem? No more details is given by Redmine logs.

We are having the same issue with Redmine 3.3.0 on Windows Server 2012.

Single ticket updates work fine with email notifications, however when a bulk edit action is done the user receives a 500 internal server error. The log then shows the following:

Sent email "[our project name - Todo [#8104](#)] (Closed) ticket description" (310ms)

Rendered mailer/_issue.text.erb (5.9ms)
Rendered mailer/issue_edit.text.erb within layouts/mailer (7.8ms)
Rendered mailer/_issue.html.erb (2.0ms)
Rendered mailer/issue_edit.html.erb within layouts/mailer (4.0ms)

Sent email "[our project name - Todo [#8200](#)] (Closed) ticket description" (243ms)

If we close the ticket on which it failed using a single operation the notification is sent and no problem is given.

Same problem here, on Redmine v3.4.1:

Log console

```
=====  
=> Booting WEBrick  
=> Rails 4.2.8 application starting in production on http://[hide]  
=> Run `rails server -h` for more startup options
```

=> Ctrl-C to shutdown server
