Description

It's Very Very Pity,

So far, I haven't find a right guide to install redmine on centos 7?

1. I tried the guide:
http://www.redmine.org/projects/redmine/wiki/Install_Redmine_25x_on_Centos_65_complete

But it failed in "gem install passenger" ,the error as:

```
[root@localhost redmine-3.3.0]# gem install passenger
ERROR:  Error installing passenger:
  rack requires Ruby version >= 2.2.2.
```

2. While I use other guide, the guide tells me to use ruby of v1.9? When I use to install rails, the error tell me to install ruby above 2.0 version.....

3. While, I use the update the ruby version to 2.2, there is another question occured: [#25224](#)

So, How can I do????????????????????
