Redmine - Feature #25513

New custom field type for Project Level (similar to "List type") - per Project specific set of values

Description

Currently custom field type List can be defined with set of values, and that set of values is used by <u>all projects</u> that have that field enabled.

I propose to define new custom field type, similar to List type that should have possibility to have <u>different set of values</u> for <u>different projects</u>.

Only with this functionality, issue #25043 brings great enhancement to serious multiproject environments.
