<b>Resolution:</b>	
<b>Description</b>	
<p>For the moment, you can create custom fields for your trackers. When you add a lot of them, it can become painful to locate a particular custom field. Even if they are not numerous, you may want to categorize your fields, for example:</p> <ul style="list-style-type: none"><li>- "Computer requirements" section will contain:<ul style="list-style-type: none"><li>- custom field "RAM (GB)": integer</li><li>- custom field "CPU": string</li><li>- custom field "Graphics": string</li></ul></li><li>- "Program requirements" section will contain:<ul style="list-style-type: none"><li>- custom field "Browser": List</li><li>- custom field "OS": List</li></ul></li></ul> <p>You can setup sections in "Administration &gt; Trackers", and drag and drop custom fields (or even fields!) in desired sections.</p>
