

Redmine - Defect #2692

The Apache Authentication handler Redmine.pm should honor login\_required parameter

2009-02-07 10:34 - Felix Schäfer

Status:	Closed	Start date:	2009-02-07
Priority:	Normal	Due date:

Target version:		Affected version:	
Resolution:	Fixed		
Description			
Redmine: <a href="#">r2363</a>			
The Redmine.pm authentication handler for Apache should check for the login_required parameter. I currently have a redmine install that requires login, where some projects are public, so that every logged in user can read it. I would expect the svn authentication to follow the same scheme, but repositories for public projects are also available to users who are not logged in.			

History

#1 - 2009-02-07 14:38 - Felix Schäfer

I updated my Redmine.pm a little so that no unauthenticated user can access a repository in a "login\_required" Redmine installation, here is the patch:

```

```

I'll have to work a little more to make it accessible for non-project members for a public project in a login\_require redmine.

#2 - 2009-03-17 02:53 - Derrick Rapp

- File Redmine.pm added

I was just working through the same issue and came up with a complete solution. My perl experience is slim to nil so I tried to change as little as possible. In addition to the change above, I changed the SQL in the main {RedmineQuery} property to include public projects and flipped around some of the code in the is\_member function. The existing code was unsecure with LDAP authentication and I addressed that as well. I have attached my version of Redmine.pm. Can someone please review my changes and commit it into the tree? Thanks.

**#3 - 2010-08-10 13:26 - Felix Schäfer**

- Status changed from New to Closed
- Resolution set to Fixed

As far as I can see this is fixed in [r3831](#).
