| Target version: | | Affected version: | 3.3.2 |
| Resolution: | | | |
| Description | | | |
| Dear Redmine, | | | |
| We have an issue with our current version of Redmine. We have about 50 different projects in our location installation, including some plugins: | | | |
| Environment: | | | |
| Redmine version | 3.3.2.stable | | |
| Ruby version | 2.1.2-p95 (2014-05-08) [x86_64-linux] | | |
| Rails version | 4.2.7.1 | | |
| Environment | production | | |
| Database adapter | Mysql2 | | |
| SCM: | | | |
| Subversion | 1.8.11 | | |
| Mercurial | 1.4 | | |
| Git | 2.3.1 | | |
| Filesystem | | | |
| Redmine plugins: | | | |
| plantuml_macro | 0.0.1 | | |
| redmine_wiki_extensions | 0.7.0 | | |
| redmine_wiki_lists | 0.0.8 | | |
| scrum | 0.16.2 | | |
| Since a day ago, we are having problems with our (sub)projects being re-arranged incorrectly in the breadcrumbs (top left corner) and the drop-down list for project selection in the top-right corner. Please see attached file redmine-bug-breadcrumbs.png . | | | |
| Even though in the settings page of "Project A" the information is correct (Project A is a subject of Projects, which is a subproject of Development), in the breadcrumbs and drop-down list it shows that Project A is subproject of Development. | | | |
| It also seems that when we want to move one (sub)project to a different level, many other projects get "moved" unwanted. Is there some cache that needs to be cleared, or do we have some corrupted data in the database? | | | |
| Thanks! | | | |

History

#1 - 2017-10-31 16:57 - Toshi MARUYAMA

- Status changed from New to Needs feedback

Please describe more details.
What do you expect and result?

#2 - 2017-11-01 18:15 - Robin Corba

Let's say I have to following project structure in my Redmine installation:

Development > Projects > Project A

However in the breadcrumbs in the top left corner, and the drop-down list it is like this:

Development > Project A

So, I want to move 'Project A' to become the subproject of 'Projects' however when I change the parent project to 'Projects' Redmine will make the

parent project 'Development' again, which is on level too high.

In some cases, we have the following structure:

Development > Projects > Project B
Development > Project A
Finance

If I move Project A to become a child of Projects, for some reason Project B is moved to a different project (for example Finance):

Development > Projects > Project A
Finance > Project B

I think there is a bug in the project movement.

#3 - 2017-12-01 13:30 - Toshi MARUYAMA

- *Category deleted (UI)*

Did you try bundle exec rails runner "Project.rebuild_tree!"?
