<b>Description</b>			
<p>Some months ago, before the great restful reorganization patch (<a href="#">#1901</a>), I created a small feature called project tinyurl. This is a supersimple action that provides an unique permalink to a project path and redirects any request to the real project URL.</p> <p>Example:</p> <p><a href="http://www.redmine.org/redmine">http://www.redmine.org/redmine</a> =&gt; <a href="http://www.redmine.org/projects/show/redmine">http://www.redmine.org/projects/show/redmine</a> <a href="http://www.redmine.org/foobar">http://www.redmine.org/foobar</a> =&gt; <a href="http://www.redmine.org/projects/show/foobar">http://www.redmine.org/projects/show/foobar</a></p> <p>Here's a couple of real world examples:</p> <p><a href="http://code.simonecarletti.com/www-delicious">http://code.simonecarletti.com/www-delicious</a> <a href="http://code.simonecarletti.com/apachelogregex">http://code.simonecarletti.com/apachelogregex</a></p> <p>I forked Eric's repos on GitHub and provided a full patch along with functional and integration tests.</p> <p><a href="http://github.com/weppos/redmine">http://github.com/weppos/redmine</a></p> <p>All changes are available in a separate branch called tinuyrl (ehm... I misspelled it on creation!).</p>
