

Redmine - Feature #282

Ability to specify a project code

Description Within the project settings, it would be a useful idea to be able to specify a project code. For example, if I have a project which is called "Apples Bananas Carrots", I might choose my project code to be "ABC" (obviously doesn't have to be limited to 3 chars, but the shorter the better). This project code would then be used in the issue ID. So the first issue ID for that project would be "ABC-1". This way, each project can have a set of issues starting from 1 with their unique project code prepended to the front. This is not essential, but is useful for tracking when you have a number of large projects.

- Status changed from New to Closed

- Resolution set to Wont fix

Unique ids are vital when you can move issues between projects.

#2 - 2014-08-23 19:10 - Andriy Lesyuk

For those, who comes to this issue - this was implemented in the [ISSUE-id](#) plugin.

#3 - 2015-04-04 02:26 - Timur Rahmanov

ISSUE-id plugin is exactly what I need. but do we have any plugin that supports 2.6.2 Redmine?
