

## Redmine - Patch #28295

### Show name changes in diff preview

#### Description

When previewing uploaded diff/patch files, which contains renames, Redmine will always show the new file name in the diff preview. This can be misleading, since it would not show that the old file was removed.

The attached patch keeps track of the previous file name and shows the additional information in the UI.

Please note, this patch was tested with/developed for git's patch files. Also, pure renames (without file modifications) will not be visible -- just like they are today.

Thank you for taking a look. Unfortunately, I didn't set up the test repositories. That's why I didn't catch the test failure.

Attached you may find an updated patch. Now all tests seem to pass fine.
