

Redmine - Feature #2840

Allow My Page blocks to be added to from a plugin

2009-02-25 21:08 - Eric Davis

Status:	Closed	Start date:	2009-02-25
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	Plugin API	Estimated time:	0.00 hour
Target version:	0.9.0		
Resolution:	Fixed		
Description			
It would be great if a plugin could add a new My Page block. Right now the blocks are frozen constants. Maybe they could be refactored into a Database backed Model?			

Associated revisions

Revision 2528 - 2009-02-26 17:15 - Jean-Philippe Lang

Allow underscore in block partial name (#2840).

Revision 2529 - 2009-02-26 17:36 - Jean-Philippe Lang

Allow My Page blocks to be added to from a plugin (#2840).

Partials must be placed under the app/views/my/blocks directory of the plugin.
An example can be found in the sample plugin.

History

I'm definitely on board with this one. I'm finding that few people in my Redmine instance are using *My page*. If it could be augmented via plugins to suit their needs, that'd be sweet. :)

#2 - 2009-02-25 22:37 - Mischa The Evil

+1 ;)

#3 - 2009-02-26 17:37 - Jean-Philippe Lang

- Category set to Plugin API
- Status changed from New to Resolved
- Target version set to 0.9.0
- Resolution set to Fixed

Feature added in [r2529](#). Let me know what you think.

- File patch.txt added

Mm. I like. Ran into one issue though. I wrote a plugin that requires custom CSS.

```
<% content_for :header_tags do %>
  <%= stylesheet_link_tag 'schedules', :plugin => 'redmine_schedules' %>
<% end %>
```

This code is fine when the page loads and the widget is there, but the CSS isn't included when the widget has been just added (before you hit save). I've attached a patch that would allow style and script additions to the page.

Does this work for you?

#5 - 2009-03-09 17:21 - Brad Beattie

Also, there seems to be an issue with this implementation. I can't place any custom my page blocks in either the left or right content containers. If I do and hit save, it just appears in the top container.

Shouldn't you patch app/views/my/page_layout.rhtml instead of page.rhtml ?

Also, there seems to be an issue with this implementation. I can't place any custom my page blocks in either the left or right content containers. If I do and hit save, it just appears in the top container.

I'm able to move custom blocks to the right or left after they have been added.

I'm closing this ticket since the feature is added.
Please open a new ticket if I missed anything.
