

Redmine - Feature #2847

ability to give redmine::load_default_data a default value using environment variable

2009-02-26 14:33 - J r my Lal

Target version:	0.8.3		
Resolution:	Fixed		

Description

The idea would be :

```
rake redmine:load_default_data RAILS_ENV="production" REDMINE_LANG="fr"
```

if \$REDMINE_LANG is defined, no question would be asked.

I ask this for a reason : debian packaging is not happy with direct user input.

Here's some suggestion, changing behavior only when REDMINE_LANG is defined, in lib/tasks/load_default_data.rake :

```
desc 'Load Redmine default configuration data'

namespace :redmine do

  task :load_default_data => :environment do

    include Redmine::I18n

    set_language_if_valid('en')
    envlang = ENV['REDMINE_LANG']
    if !envlang || !set_language_if_valid(envlang)

      puts

      while true

        print "Select language: "

        print valid_languages.collect(&:to_s).sort.join(", ")

        print " [#{current_language}] "

        lang = STDIN.gets.chomp!

        break if lang.empty?

        break if set_language_if_valid(lang)

        puts "Unknown language!"

      end

      puts "====="

    else
      lang = envlang
    end

    begin

      Redmine::DefaultData::Loader.load(current_language)
```

```
    puts "Default configuration data loaded."

    rescue => error

    puts "Error: " + error

    puts "Default configuration data was not loaded."

  end

end

end
```
