Resolution:	Fixed		

Description

If the inbox contains an email without the From: header, currently this will cause the rake script to throw, and no more emails are processed.

I have this situation with an account on an Exchange server, and we have a spam filter on the server which sends out digest emails regarding spam. These emails do not have a from field. I am not sure if it is malformed, but it shouldnt affect the operation of the imap import operation.

I will attach a fix to silently ignore these emails.

Associated revisions

Revision 2553 - 2009-03-06 19:25 - Jean-Philippe Lang

Fixed: MailHandler raises an error when processing an email without From header (#2916).
