| Description Hello, I have a problem with ram usage after trying to download attachment. My machine has 1 GB of RAM and normal usage is less than 350MB, but when I click to download attachment for example 70MB there is 100% of ram usage and apache2 crashes. What is funny the attachment don't even start to download. Is there any solution for that except gave this machine more RAM. Regards Matthew | | | |
