

Redmine - Defect #2927

Email notification does not work if user_name is a number

2009-03-07 14:10 - Dominik Appl

Status:	Closed	Start date:	2009-03-07
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	Email notifications	Estimated time:	0.00 hour
Target version:	0.9.0	Affected version:	0.8.1
Resolution:	Fixed		
Description			
When user_name is a number you cannot send emails according to email.yml.example			
An error occurred while sending mail (can't convert Fixnum into String)			
Not working settings:			
<pre>production: delivery_method: :smtp smtp_settings: address: smtprelaylb.ispgateway.de port: 25 # domain: ispgateway.de authentication: :login user_name: 20002456 password: blueberry</pre>			
Solution: Working Settings with adjusted user_name			
<pre>production: delivery_method: :smtp smtp_settings: address: smtprelaylb.ispgateway.de port: 25 # domain: ispgateway.de authentication: :login user_name: "20002456" password: blueberry</pre>			
You should adjust email.yml.example or fix the code (because finding out this takes some time for a not ruby developer like me). Notice that the same happens if the password is a number (see #2738)

Revision 2564 - 2009-03-07 14:41 - Jean-Philippe Lang

Add double quotes to user_name and password in email.yml.example (#2927).

History

#1 - 2009-03-07 14:40 - Jean-Philippe Lang

- Status changed from New to Closed
- Target version set to 0.9.0
- Resolution set to Fixed

YAML will automatically unserialize 20002456 as an integer, and "20002456" as a string. I don't want to patch ActionMailer, so double quotes are added to email.yml.example in [r2564](#). Thanks for pointing this out.

#2 - 2016-02-24 08:19 - Sunny Arge

Actual area is the password field.

Please change from;

```
password: blablabla
```

to;

```
password: "blablabla"
```

That solved my problem.
