Category:	Email notifications	Estimated time:	0.00 hour
Target version:	4.0.0		
Resolution:	Fixed		
Description			
<p>The purpose of this issue is not to implement any feature but to add a notice regarding the removal of a feature done by #26791 to the changelog.</p> <p>:async_smtp and :async_sendmail delivery methods, which were used for sending emails asynchronously, have been removed by #26791. Redmine 4.0.0 sends emails asynchronously by default using ActiveJob. Therefore, those two delivery methods are no longer necessary.</p> <p>If you are using: async_smtp or :async_sendmail delivery method on Redmine prior to 4.0.0, you have to update email settings during an upgrading process. Please change config/configuration.yml to use :smtp or :sendmail delivery method instead. Otherwise, Redmine fails to start and log an error message like the following.</p> <p>Redmine now uses ActiveJob to send emails asynchronously and the :async_smtp delivery method is no longer available. Please update your config/configuration.yml to use :smtp delivery method instead.</p>
