| Description It would be good for the admin or project manager to be able to see reports on all projects. Issues, Planning grantt etc. This is very usefull for resource allocation and future planning. Usually lots of projects are activeat the same time and its hard to visualize them all at the same time, in order to report or allocate more members, resources etc. Overall this projects so far is great. Good Work. | |

I guess a work-around is to have a parent project and have all other projects are sub-projects but then you cant have more sub projects. Hopefully in the near future information on all projects can be provided.

#2 - 2007-05-27 12:30 - Nikolay Solakov

Hi,
I vote for this with four hands :)
The project managers in my company want to see what people do in all projects with a simple query.
The workaround proposed by Mar T is not so good, because when I make filter by "Assigned To" in the parent project, I need to add these people as members of the parent project to see them in the "Assigned To" combo-box. They can see then the issues in the sub-projects and it's just not the way that this should be done. Hope you got my thought.

This is a serious thing that should be added.
I hope Jean-Philippe can do this easy.
Maybe I'll have time soon to learn ruby in details to help with something.

Thanks,
Nikolay

I just completed and deployed changes to produce issue reports across all projects. It is modeled after the reports page for a project but also summarizes issues by assignee. All of the drills and exports seem to be working.

I also updated My Page to summarize up to 100 issues assigned to me, sorted by priority, and then up to 100 issues reported by me, so everyone gets a full view of what is assigned and what they reported. I implemented the new issues report as a new top level menu item. Also, by the way, the new report includes issues from all public projects and all projects on which you are a member - so project security is enforced.

These changes are on top of redmine 0.5.

Anyone who would like more info, you may email me at krobson@yahoo.com to discuss. Be advised - I am new to RoR so it may not be pretty.

#4 - 2007-06-05 15:37 - Nikolay Solakov

Hi,
Are you planning to post a patch for that, Kurt?
I'd be happy to use it until Jean-Philippe implement something like this.

Thanks,
Nikolay

#5 - 2007-06-05 16:02 - Kurt Robson

Nikolay -
I am not quite sure how to go about that. in the meantime, I'd be happy to send a zip file of my redmine source where these changes exist. or if you want to send me some instructions, please do so. please email me at krobson@yahoo.com.
Kurt

#6 - 2007-09-24 14:36 - John Britton

Has there been any further development of this feature? I would gladly work to implement it/clean up the existing implementation. Kurt, I've sent you an email, I'll make a patch from what you've got if you send it to me, and continue to improve from that point.

#7 - 2007-12-17 16:54 - Maxim Krušina

I can see issues report by project (<http://redmine.mydomain.com/projects/68/issues>, and also for all projects together: <http://redmine.mydomain.com/projects/68/issues>), this is ok. But we need the same for time tracking.

I'm really new to RedMine, but from my point of view it can be implemented in the same way as tickets. For example, on this URL you'll see tickets for one project: <http://redmine.ourdomain.com/projects/35/issues>, on this URL are tickets for all projects: <http://redmine.ourdomain.com/issues>

So with time tracking, report for one project is: http://redmine.ourdomain.com/timelog/report?project_id=52
(or using rewrite? it can be <http://redmine.ourdomain.com/projects/35/timelog/>)
so timetracker for all projects should be something like <http://redmine.ourdomain.com/timelog/>

This is related to [#348](#) (or duplicates). John, did you ever get the source and produce a patch?

#9 - 2008-12-05 23:46 - Mischa The Evil

Imho this issue is resolved by [r2088](#). Please provide some feedback if this issue can be resolved...

#10 - 2008-12-31 00:54 - Mischa The Evil

- Category set to Issues
- Status changed from New to Closed
- Resolution set to Fixed

Feature implemented, thus issue closed.
