Description
Allow an administrator the option to "Archive" projects. Any projects with an "Archive" flag will not appear in the main application. Issues belonging to that project and any sub-projects should not appear in the application either.

History

#1 - 2007-05-16 12:10 - Damien McKenna

I should have noticed this one when I submitted #10825, basically the same feature.

Where would you like the archived projects to be listed? Would it automatically archive sub-projects that may have previously been open? What would happen to open tasks in these projects, would they be marked with a different status (e.g. "archived before completion").

#2 - 2007-05-17 06:57 - Jeffrey Jones

For the purposes of my company we would want the following.

The archived projects would still be visible on the Admin "Project listing" screen, just not on the standard one.

All sub-projects for an archived project would also be archived. Any issues assigned to these projects or sub-projects would disappear from the various parts of the system (calendar, issues assigned in the 'my' pages etc).

There wouldn't be any status update to these issues, they would just disappear. Should the project be unarchived then all the issues would re-appear in the same state they were last left in.

Committed in rev 549.

- Only administrators can archive/unarchive projects.
- Once archived, the project is visible on the admin project listing only. It doesn't show up anywhere else in the app. Subprojects are also archived.
- Archive/unarchive preserve everything on the project (issues, members, ...).
- A subproject can not be unarchived if its parent project is archived.
